-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 31 January 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 5-8 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 5-8 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_

- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

Application/Control Number: 09/919,392  
Art Unit: 1742

### DETAILED ACTION

1. New claims 5-8 have been presented for examination. These new claims correspond to the originally filed claims 1-4, which have been cancelled.
2. In view of the new versions of the claims, the rejection under 35 U.S.C. 112, 2<sup>nd</sup> paragraph and the objections to the claims have been withdrawn.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Great Britain Patent No. 1,304,572.

Great Britain Patent No. 1,304,572, hereinafter referred to as GB '572, teaches the invention substantially as claimed. GB '572 teaches (page 1, lines 23-33) a titanium alloy having less than 0.1wt% carbon, less than 0.05wt% nitrogen, and less than 0.1wt% oxygen, which would give a total of less than 0.25wt% of the total of those elements, substantially overlapping applicant's claimed range of 0.04-0.27wt% of the total of those elements. GB '572 also teaches (page 1, line 28) the alloy having less than 0.05wt% iron, overlapping applicant's claimed range of 0.1wt% iron. With regards to the claim limitation wherein the alloy has "substantially no copper", the lower limit of copper present in the alloy of GB '572 is only 0.1%, and would not significantly change the properties of the alloys, and therefore the alloys are considered to be substantially

Application/Control Number: 09/919,392  
Art Unit: 1742

the same. A prima facie case of obviousness exists where the claimed ranges and prior art ranges do not overlap, but are close enough that one skilled in the art would have expected them to have the same properties. *Titanium Metals Corp. of America v. Banner*, 778 F.2d 775, 227 USPQ 773 (Fed. Cir. 1985). MPEP 2144.05. In this case, because the alloy compositions are so similar, a prima facie case of obviousness exists. GB '572 also teaches (page 1, lines 34-48) the having a Vickers hardness of less than 170. For the examples of compositions given in the table on page 1, of GB '572, the composition would meet the range required for applicant's equation (2), and would give a Vickers hardness range of 158-217, so the value of less than 170 given in GB '572 meets the hardness of applicant's claimed invention and the compositional ranges of applicant's claimed invention. While GB '572 does not specifically recite work hardening the alloy, this is a process limitation, and is given little patentable weight in a product claim. Even though product-by-process claims are limited by and defined by the process, determination of patentability is based on the product itself. If the product in the product-by-process claim is the same or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process. *In re Thorpe*, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985). See also MPEP 2113. Because the product of GB '572 and the claimed invention are substantially the same in view of their compositions and hardnesses, GB '572 teaches the claimed invention.

5. Claims 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Great Britain Patent No. 1,304,572 in view of Seeger et al. (U.S. Patent No. 5,666,841).

Application/Control Number: 09/919,392  
Art Unit: 1742

GB '572 is discussed in above paragraph 6.

GB '572 does not specifically teach applying the preliminary working step to the alloy.

Seeger et al. teaches (col. 4, lines 5-34) finish rolling the component after work hardening the component, and teaches that the finish rolling provides the advantage of obviating small irregularities in order to provide a finished product with improved surface quality and corrosion resistance. Seeger et al. also teaches (see claim 1) that such techniques are useful in titanium and titanium alloy components.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to perform work hardening before finish rolling the component as taught by Seeger et al. on the alloy of GB '572 in order to provide an improved surface finish and corrosion resistance, as taught by Seeger et al. (col. 4, lines 5-34).

In regards to the features of claim 7, GB '572 does not teach preliminary rolling in the direction perpendicular to the direction of hot or cold rolling.

Seeger et al. teaches (col. 3, lines 1-22) that rolling in multiple, mutually perpendicular directions is useful for creating internal stresses in such a manner that intercept loads occurring along the loading axis, and that this is also useful for combating crack growth and corrosion.

It would have been obvious to one of ordinary skill in the art to perform the rolling in multiple directions as taught by Seeger et al. on the alloy of GB '572 in order to form internal stresses to improve crack growth and corrosion resistance, as taught by Seeger et al. (col. 2, lines 1-22).

Application/Control Number: 09/919,392  
Art Unit: 1742

In regards to the features of claim 8, GB '572 teaches (page 1, lines 24 and 34) that the alloy may be used in an annealed condition.

***Response to Arguments***

6. Applicant's arguments with respect to claims 5-8 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

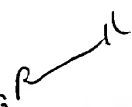

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew E Wessman whose telephone number is (703)305-3163. The examiner can normally be reached on Monday through Friday, 8:00am to 4:30pm.

Application/Control Number: 09/919,392  
Art Unit: 1742

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on (703)308-1146. The fax phone numbers for the organization where this application or proceeding is assigned are (703)872-9310 for regular communications and (703)872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703)308-0661.
